

VIRGINIA DENTAL IMPLANT INSTITUTE

The Faces of Periodontics and Advanced Implant Dentistry

Virginia Dental Implant Institute is where patients go for specialty level care that is precise, predictable, and personal. Dr. Dickson, DMD MS MS, leads a practice patients travel to from across Virginia and beyond for advanced implant and periodontal care.

Dr. Dickson completed three years of rigorous dental implant specialty training, has three graduate degrees, is widely published, and has taught continuing education to dentists, hygienists, and specialists for many years. He has been a Top Doctor since 2018 and VDII is a Nobel All-on-4 Center of Excellence. Those credentials shape every treatment plan. General dentists, other dental specialists, and physicians routinely refer complex cases to VDII. They rely on Dr. Dickson as their go-to specialist and ask him to place implants in their own mouths and in the mouths of family members who need care. When routine implant cases fail for other dentists or complications arise, Dr. Dickson is the specialist called in to make the revisions.

At VDII, implant success begins long before the first incision. Advanced digital planning, 3D CBCT imaging, and fully guided surgery place implants where bone, function, and esthetics align. We pair precise placement with immediate provisional restorations when appropriate, prosthetic-driven design, and careful occlusal management so new teeth perform like natural teeth and last. The result is reliable single-tooth implants, implant-supported bridges, and full-arch restorations that restore chewing, speech, and confidence while minimizing repeat visits for traveling patients.

Beyond the treatment room, Dr. Dickson has a passion for travel and challenge. He has explored more than 40 countries across six continents, taken part in dental mission trips, and even summited Kilimanjaro twice with his wife and once with their sons. These global experiences shape his perspective in subtle but powerful ways – reminding him daily of the value of preparation, adaptability,

PERSONAL.**

and empathy. Whether navigating a remote mountain trail or guiding a complex implant case, he approaches every situation with steady focus and thoughtful precision.

Your visit begins with a complimentary consultation and 3D evaluation. We present clear options, show a digital preview of expected results, and outline a straightforward timeline so travel and follow-up are efficient. For out-of-town patients, we coordinate imaging and scheduling to minimize return visits.
